

Jump-start entrepreneurship of agro-industrial sector in rural areas focusing on craft and local products

In this issue:

1. EU Level Report
2. Transnational Partners meeting

Project Newsletter

1. EU Level Report

The Rural Jump-Start project is on an extraordinary path and us partners can proudly announce that our EU Level Report based on the inquiry done in order to understand the overall knowledge that youth have on the project topic. All partners did their job exquisitely but we are especially thankful for SBTC`s work since they created the EU Level Report.

With the research done we were able to determinate that most young entrepreneurs understand the meaning of Rural areas but think that they are not a safe path to invest their career. The lack of investments, infrastructures, stability and the overall attention given by the government is poor.

The health systems in Rural areas do not fulfill the needs of the population, the taxes, the logistics and the non-existent business support are some of the external worrisome factors.

Financial Management and Environmental sustainability are among the potential training topics that our inquired group believe that should be exploited as a learning opportunity.

For further information we invite you to read the document that is available for consultation on our project website <https://ruraljumpstart.eu/2022/12/13/rural-jumpstart-local-action-report-now-available/>.

This 2nd Newsletter of the Rural Jump-Start project strive to inform about the current situation of the project as well as our meetings.

2. Transnacional Partners meeting

On the 22nd of November the partners had an online Transnational meeting. Although it wasn't presential, it had the utmost importance for the reason that the start of PR2 was in question. The partners gathered to discuss each training module with the intention of programing the work to follow a specific guideline. A lot was gained in the meeting, especially an insight overview of each module that we are excited to share in the near future.
